

# WEISS POWDER APPLICATOR MACHINES - SERIE 200

**NEW!**

## HOW IT WORKS

The system consists of a hopper and vibrator that spreads out the melt powder (granulate) in an even coating over the paper that travels on a conveyor belt.

The excess powder is removed by a combination of air blowing and suction together with a shaking mechanism.

The automatic filtration system filters the dusty powder, sends the granulate back to the hopper for re-processing and exhausts filtered, clean air.

TYPE 40/180 S

In other words it is a **SPREADING - CLEANING - RECYCLING AND POLLUTION FREE SYSTEM**

The major benefits are totally even application of powder across the 40 or 54 cm width; the complete removal of excess powder from transfer, the recycling of excess powder and the total containment of powder in a clean working environment.

TYPE 54/150 SX

Excellent adjustable powder feeder
