

MEDIUM 6/6

MEDIUM CAROUSEL

The M carousel uses the highest quality components - strong bearings and a single "compression" spring produce a smooth print arm action.

Side clamps and micro-registration are combined with an adjustable pallet arm height for an extremely rigid print platform. The registration forks are factory set and require no lubrication or adjustment.

The print arms have adjustable up-screen positions and the single spring has adjustable tension to accommodate different screen weights.

The modular construction gives expandability from 4/1 to 6/6.

MANUAL CAROUSELS

SMALL 4/4

SMALL CAROUSEL

The S carousel has built-in expandability, from 4 colour single pallet up to a 6/6. With backholding clamps or side clamps.

2 ERGO + M6/R6

SEMI AUTOMATIC

The ERGO-Printer Systems

The Semi Automatic carousel has manual pallet rotation and mixture of manual and automatic printheads.

The principal benefit of the Ergo-Printer is that it can be used to increase output and simultaneously reduce the physical workload.

In addition, print quality is increased, total flexibility is maintained and no extra space is required.

The Ergo-Printer runs purely on compressed air but has all the features needed of an automatic printhead - adjustable print and flood squeegee pressure, stroke length and speed.

It is available in 40x40 cm print area.

VACUUM CAROUSELS

Manual carousel specially designed for printing transfers and other multicolour jobs on paper, plastic ect.

As all our other machines it is modular build, and can be equipped to meet your special demands, up to 6-colours and 6-pallets.

The vacuum-mechanism is rotatable and every single pallet has it's own on/off contact. The silent vacuum-motor is placed under the machine.

The machine is extremely rigid and accurate build. It is constructed after the same strong principles as bigger fully-automatic carousels, which enables you to print very high quality manually.

In our smart modular system it's also an option to supply it with a mix of vacuum pallets and traditionally pallets as well as Hold-Downs.

VACUUM SYSTEMS

VACUUM PALLETS

VACUUM PALLETS

Made in various sizes.
Optional manual or automatic on/off valves and pumps.

UNI-PRINTER

The Uni-Printer single colour table has high adjustable pallet 60 cm and can be delivered with various holding clamps for screens and micro-adjustment.
